

Ex. No. 2	WORKING WITH HTML5 FORM AND MEDIA ELEMENTS
Date of Exercise	21.07.2026
GitHub Host Link	https://github.com/adhishm-0/web-technology-lab/tree/3a8dfd2ebc63367acb442f8c1106176f4411b495/exp2

Aim

To design and develop an **Astrology & Horoscope Website** using HTML5 by implementing various HTML5 elements such as headings, tables, images, hyperlinks, audio, video, forms, fieldsets, progress bar, embedded documents, iframe, and other multimedia elements to create an interactive and user-friendly platform for exploring zodiac signs, daily horoscopes, astrological predictions, and birth chart information.

Description

This experiment is implemented using HTML5 to design a simple **Astrology & Horoscope Website**. The webpage provides information about zodiac signs, daily horoscope predictions, astrological services, and an interactive horoscope registration form. The following HTML5 elements are used:

- `<!DOCTYPE html>` Declares the document as an HTML5 document.
- `<html>` Root element that contains the entire webpage.
- `<head>` Contains the title and metadata of the webpage.
- `<title>` Displays the webpage title in the browser tab.
- `<body>` Contains all the visible contents of the webpage.
- `<table>` Organizes the webpage into different sections and aligns the contents.
- `<tr>` Creates rows in the table.
- `<td>` Creates table cells.
- `<img>` Displays the Astrology & Horoscope Website logo and zodiac images.
- `<h1>` Displays the main heading of the webpage.
- `<h2>` Displays section headings.
- `<h3>` Displays sub-headings.
- `<p>` Displays descriptive text about astrology and horoscope services.
- `<a>` Creates navigation hyperlinks such as Home, Zodiac Signs, Daily Horoscope, Compatibility, Birth Chart, and Contact.
- `<audio>` Plays relaxing meditation music or astrology-related audio.
- `<video>` Displays astrology or horoscope-related videos.
- `<iframe>` Embeds a YouTube astrology or horoscope video.
- `<embed>` Displays an astrology guide or zodiac PDF file.
- `<form>` Creates the horoscope registration form.
- `<fieldset>` Groups related form controls.
- `<legend>` Displays the title of each fieldset.
- `<label>` Displays labels for form fields.
- `<input>` Accepts user information such as name, date of birth, birth time, birth place, email, and password.
- `<select>` Creates a drop-down list for selecting the zodiac sign.
- `<option>` Defines the options inside the drop-down list.
- `<progress>` Displays horoscope profile completion or astrology learning progress.
- `<br>` Inserts line breaks between elements.

- `<!-- -->` Adds HTML comments for better readability of the source code.

Procedure:

1. Open Visual Studio Code or any HTML editor.
2. Create a folder named Kids Learning Website and create an index.html file.
3. Add the basic HTML5 structure using `<!DOCTYPE html>`, `<html>`, `<head>`, `<title>`, and `<body>`.
4. Design the webpage using tables, headings, images, and navigation links.
5. Add learning topics, educational video, audio, progress bar, and student registration form.
6. Embed the worksheet PDF using the `<embed>` tag.
7. Add the contact details at the bottom of the webpage.
8. Save the file and run it in a web browser or Live Server.
9. Verify that all HTML elements and multimedia contents are displayed correctly

Program

```
<!DOCTYPE html>
